

Week 2: Descriptive Statistics

Unit 7: Distorting the Truth Using Descriptive Statistics

Distorting the Truth Using Descriptive Statistics

Introduction

Distorting the Truth Using Descriptive Statistics

Errors in presenting data

- There are a number of ways the media and unscrupulous politicians present data and distort the truth.

Use area to equate to value

Bad Presentation

Minimum Wage

Good Presentation

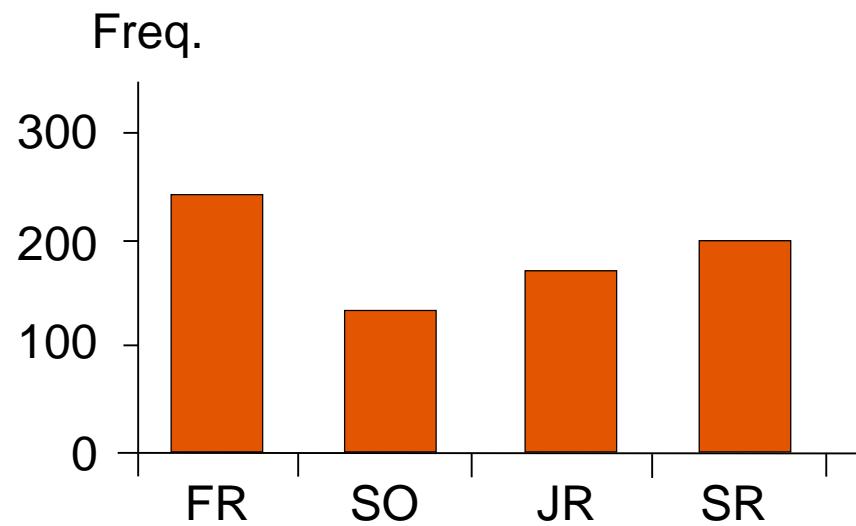

Minimum Wage

No relative basis to compare data

Bad Presentation

A's by Class

Summary

- Visualization guru Edward Tufte explains “excellence in statistical graphics consists of complex ideas communicated with clarity, precision and efficiency”.
- Because of the variation that inevitably crops up in graphical representations of data, Tufte came up with six principles that are meant to ensure high graphical integrity. These are outlined in his book *The Visual Display of Quantitative Information*.
- These are as follows:
 - Representation of numbers should match the true proportions.
 - Labeling should be clear and detailed.
 - Design should not vary for some ulterior motive.
 - To represent money, well known units are best.
 - The number of dimensions represented should be the same as the number of dimensions in the data.
 - Representations should not imply unintended context.
